Index to Volume 80

Subject Index

A few simple questions about colour in art and science, (293), 43
A life in science teaching – and other things, Colin Siddons, (292), 22
A physical-science trail, (293), 104
A practical project to help bilingual students to develop their knowledge of science and English language, (292), 65
A role-play to illustrate the energy changes occurring in an exothermic reaction, (293), 113
A simple explanation of salt bridges for post-16 students, (290), 116
A simple method for determining the Earth's angle of tilt, (292), 120
A thinking skills approach to A-level physics questions, (290), 99
A xerophyte model: surface-area-to-volume, (291), 93
About argument and discussion, (291), 57
absorption spectrum, (292), 123
Acid–base indicator from herbal tea, (293), 13
acids, (291), 67
Activities with optical fibre communication, (290), 89
Activity of a protease on a protein, (292), 111
Advanced biology and living materials, (291), 12
Advanced level biology – is there a problem?, (290), 25
Advanced school physics in the United States, (291), 81
air, composition of exhaled, (290), 55
AKSIS, ASE–King's Science Investigations in Schools Project, (292), 101
alkalis, (291), 67
alkanes, synthesis, (290), 110
Allelopathy: a neglected aspect of plant biology in schools, (292), 87
Alternative models for dissolution, (290), 79
An introduction to the Polymerase Chain Reaction, (290), 49
An investigation into Kolbe's method, (290), 110; (293), 13
art, and chemistry, (293), 31
ASE–King's Science Investigations in Schools (AKSIS) Project, (292), 101
assessment, formative, (291), 39
astronomy, (292), 57, 75
atomic forces, (290), 122
Back to basics for science teachers in rural India, (291), 77
battery holder, (290), 120
Beyond 2000, (292), 13; (293), 12
bilingual students, (292), 65
Biologists look forward to a more scientifically literate world, (291), 25
biology, A-level, (290), 25
biology education, (290), 25
boiling points, (293), 115, 116
Boiling points of Group IV chlorides, (293), 115
Bozo the Clown's contribution to teaching A level genetics, (290), 105
bubbles in liquids, (291), 104
Bunsen, Robert Wilhelm, (290), 75
camera obscura, (291), 110
carbon dioxide, (291), 98
catalysts, (290), 63
Celebrating science: Science Fairs, (291), 87
Changing children's images of scientists: can teachers make a difference?, (293), 79
chemical apparatus, (290), 75
chemical elements, (290), 71
Chemical equilibrium, (291), 12
Chemical equilibrium – push and pull, (292), 18
Chemical kinetics illustrated by an improvised experiment, (292), 114
Chemistry and art, (293), 31
chemistry, GCSE, (291), 29
chemistry education, (291), 29
children's images of scientists, (293), 79
chlorides, (293), 115
colour in art and science, (293), 43
colour subtraction, (292), 99
combined heat and power, (292), 27
Coming to a tree near you!, (293), 15
commercialism, (290), 37
communications, (290), 89
Comparisons are odious, (290), 11
computer presentation, (291), 53
Concept cones, (293), 107
crystals, (290), 112
curriculum, development, (291), 25
curriculum, future development, (291), 19
curriculum, physics, (291), 35
data analysis, (293), 53
Dawson, Dr Marie, (291), 17
day length, (290), 85
density of air, (293), 118
diet, (290), 43
Digestion aids? Games with guts, (291), 88
dissolution, (290), 79
DNA, (290), 49
Does knowledge about a balanced diet influence eating behaviour? (290), 43
Does the Periodic Table refer to chemical elements?, (290), 71
Doubling a rate of reaction, (290), 106
ears, (292), 107
Earth science in GCSE science syllabuses and examinations, (293), 87
Earth's angle of tilt, (292), 120
Earth's elliptical orbit, (292), 43
eclipses, solar, (292), 35, 39, 49; (293), 15
El Nino, (291), 100
electric cell, (290), 11
emulsion, (290), 109
enculturation, (290), 17
energy, (290), 122
environmental science, (290), 37
enzymes, (292), 111
Equipment assembly for showing an absorption spectrum, (292), 123
Erroneous ideas about the composition of exhaled air, (290), 55
exhaust fumes, (291), 98
exothermic reaction, role-play, (293), 113
Experiments with zeolites, (290), 63
Finland – teaching science, (292), 15
Formative assessment – raising standards inside the classroom, (291), 39
Formative assessment strategies in secondary science, (293), 71
formula determination, (292), 119
Foucault's pendulum, (290), 124
Frank Halliwell, (290), 12
From physics teacher to Space Shuttle Flight Director, (292), 61
galvanic cell, (290), 116
games, digestion, (291), 88
Gare, Kathleen, D. (293), 95
GCSE science syllabuses, (293), 87
Genetic engineering of animals for medical research: student's views (293), 23
genetic fingerprinting, (290), 49
genetics, A-level, (290), 105
giant laser show, A, (291), 108
gravitation and tides, (293), 125
gravitational potential, (293), 121
gravimetric determination, (292), 119
greenhouse effect, (291), 98
Group IV chlorides, (293), 115
Hale-Bopp, (292), 65
Halliwell, (290), 12
Have you heard the one about – science?, (290), 29

The Schools Online Science Experience, (293), 65
health education, (290), 43
Heavens Above! A community astronomy project, (292), 57
history of science, (290), 75
How long the days are – part 2, (290), 85
Hullabaloo and pandemonium – let's hear it for the eclipse, (292), 35
human electrical cell and the electrochemical series, The, (290), 11
humour in science, (290), 29

Ideas about acids and alkalis, (291), 67
Identifying and teaching essential science vocabulary, (291), 63
India, teaching in, (291), 77
indicators, (293), 13
Internet in science education, (293), 65
investigations, biology, (292), 87
investigations, classification, (292), 101
Issues arising from organisational arrangements at key stage 4, (291), 71

key stage 4, (291), 71
Kidney role-plays, (292), 93
Kolbe's method, (290), 110; (293), 13

language, (290), 11; (291), 63; (292), 65
laser beam, (290), 120
lasers, (291), 108
Learning about colour subtraction by role-play, (292), 99
learning science, (290), 17
learning styles, (290), 99
Lissajous figures, (291), 108
Lissajous figures with a laser beam, (290), 120

Make your lessons on ears and hearing fun and challenging, (292), 107
Making another inexpensive battery holder, (290), 120
maths and science fun trail, (293), 102
measurement of the solar day, (290), 85
Measuring the density of air using a helium- or hydrogen-filled balloon, (293), 118
medical research, (293), 23
Microscale chemistry, (292), 117
Misconceptions about the composition of air, (292), 17
Mix and separate, (291), 103
model, (291), 93
Modelling an emulsion, (290), 109
modelling chromosomes, (290), 105
modelling dissolution, (290), 79
Modelling Foucault's pendulum, (290), 124
modelling solar system, (292), 65
Modification to capillary method for determining surface tension of liquids, (292), 126
molluscs, (291), 47

National Curriculum, data-analysis skills, (293), 53
National Curriculum review, (291), 19, 25, 29, 35
National Gallery, (293), 31
Numeracy in science, (293), 59
nutrition in plants, (293), 109
optical fibres, (290), 89

pendulum, (293), 124
Perception of risk in the school laboratory, (290), 12
Periodic Table, (290), 71
pH curves – the essential formulae, (291), 95
physics, pre-16, (291), 35
physics, A-level, (290), 99; (291), 81; (293), 121
phytotoxins, (292), 87
Plant nutrition studies in the classroom, (293), 109
Polymerase Chain Reaction, (290), 49
power stations, (292), 27
practical science, (291), 77
Pre-16 physics; dreaming of what might be, (291), 35
precipitation of salts, (292), 117
primary astronomy, (292), 75
problem solving, (290), 99
protease, (292), 111

radio tuning, (291), 103
radioactivity problems, (290), 12
reaction rates, (290), 106; (292), 114
Resolving forces – I do it my way, (292), 15
Rogers and Einstein, (291), 12
Rogers, Eric Malcolm, (290), 13; (291), 12
role-play, (292), 93, 99; (293), 113
Round crystals, (290), 112

salt bridges, (290), 116
Scenes from life in a darkened 'room' – the camera obscura, (291), 110
Schools Online, (293), 65
Science education as enculturation: some implications, (290), 17
Science education for the future, (291), 19
Science Fairs, (291), 87
Science teaching in Finland – an English perspective, (292), 15
science trail, (293), 102, 104
Science Word Bank, (290), 11
Shadowing a pendulum, (293), 124
Siddons, Colin, (292), 22
Slugs and snails as teaching tools, (291), 47
Solving radioactivity problems without using the decay constant, (290), 12
Some of Bunsens's other inventions, (290), 75
space flight, (292), 61

Stability and science education, (292), 18; (293), 15
statistics, (290), 11
Steel manufacture in New Zealand, (290), 108
students' views, (293), 23, 79
subject specialism, (291), 71
surface tension, measurement of, (292), 126
surface-area-to-volume, (291), 93

teacher training, (290), 17
Teaching about weight, (292), 14; (293), 14
teaching aids, (291), 53
Teaching and learning astronomy in primary schools, (292), 75
teaching approaches, (290), 29, 55; (291), 57; (292), 93, 99, 107; (293), 121
Teaching data-analysis skills: implications for the National Curriculum, (293), 53
Teaching gravitational potential in A-Level physics, (293), 121
teaching overseas, (291), 77, 81; (292), 15
technicians in science departments, (293), 17
telescope, (292), 57
textbooks, errors, (293), 14
The circumstances of the 1999 total eclipse of the Sun, (292), 39
The combined power plant – a revolution in power generation, (292), 27
The contribution of exhaust fumes from cars to greenhouse effect, (291), 98
The corporate infiltration of science education, (290), 37
The Earth's elliptical orbit, (292), 14
The gravimetric determination of the formula of a hydrated salt, (292), 119
The growth of bubbles in lager, (291), 104
The maths and science fun trail at Appleby Castle, (293), 102
The PC as an animated 'chalkboard', (291), 53
The role and management of school laboratory technicians, (293), 17
The Schools Online Science experience, (293), 65
tides, (293), 125
timetabling, (291), 71
titration, (291), 95
To name or not to name?, (293), 14
Total solar eclipse – a Caribbean adventure, (292), 49
Tuckett, Elizabeth, M., (293), 95

Unexpectedly low boiling points, (293), 116

US Space and Rocket Center, Huntsville, Alabama, (292), 61
USA – teaching physics, (291), 81
Using familiar ideas and concepts in unfamiliar situations, (290), 122
Using small video cameras in demonstrations, (293), 123

video cameras in demonstrations, (293), 123
Visking tubing, (292), 17
visual aids, (292), 107
vocabulary, (291), 63

weight, (292), 14
What future for chemistry to age 16?, (291), 29
What is not fair with investigations?, (292), 101
Who were they? – Eric Malcolm Rogers, (290), 13
Who were they? – Kathleen Gare and Elizabeth Tuckett, (293), 95
Who were they? – Marie Dawson, (291), 13
Why we get two tides each day, (293), 125

xerophyte model, (291), 93

zeolites, (290), 63
